

Measure and Fit Service

Coloured glass splashbacks measured and fitted

Simply Splashbacks are only too aware of how scary the thought of accurately measuring, handling and installing glass splashbacks may seem to you. So for jobs entailing more than a single glass splashback, we offer our measure and fit service. To obtain a quote, dig out your tape measure and write down the sizes of the glass panels you require. Then add on any sockets that you need and any shapes to be cut for cooker hoods, etc. Either send these details to us using our [contact form](#) or call our friendly sales team on 08000 355614.

Simply Splashbacks will promptly prepare an estimate for you, and if acceptable, we will arrange to come and survey your job within a few days. Simply Splashbacks take a £200 booking fee. When Simply Splashbacks have measured your job, we will calculate the final cost based on the actual details from the survey. You will then be asked to pay a second deposit, bringing the amount paid to 50% of the full value. The final 50% balance will be due upon satisfactory installation of your glass splashbacks.

For single glass splashbacks, measuring and fitting is very straight forward and can be done as a D. I. Y. job. To fit your printed or coloured glass splashback, you simply glue it to the wall with the adhesive provided. The only tools required are a mastic gun and a sharp blade.

Measuring a complicated shower enclosure using Laser Technology

Some hints for measuring your own glass splashbacks

- If you are a competent DIY'er and want to have a go, we like sizes to be presented in mm's and the dimensions clearly marked width and height. Please remember that once the glass has been toughened, it cannot be trimmed or filed, so it is important to get the measurements right the first time.
- If you make templates, they should always have straight edges, unless there is a deliberate curve or cut out. The glass will always be cut straight, and will not be scribed into walls, worktops or floors. If templates are supplied that do not have straight edges we will insist on replacements.
- First check all worktops or shower trays with a good spirit level. If the base surface is not level, we can cut the glass out of square, in order to keep the sides vertical. (It is wise to keep the sides of the glass panels vertical wherever you have glass panels butting against one another). Draw a perpendicular line the length of the base (most easily the width of your spirit level). You can then measure the difference between the base and the line at each end to determine how far out of square the height is. It is important to do this or your ends will not be vertical!
- Next do the same vertically at the ends (sides) to let you know if and by how much the sides are out of square. You can then measure between your lines and add on for any off squareness.
- It is good policy to follow this advice, whether you are making templates or supplying drawings. Do not measure too tightly – always leave a little in order to fit the panels and as a margin for error. The industry standards for glass cutting are + or – 2mm; Simply Splashbacks endeavour to achieve +0mm or minus ½mm, but there can be a variation of up to 1mm between different tape measures!
- Bear in mind at all times, particularly when going around right angle corners, that the glass will sit on the highest points of any wall, and that few walls are really flat. Where you are sitting one piece on top of another, going round an internal (or external) corner, allow at least 8mm for the thickness of the glass and adhesive. You can always give yourself a little bit of movement by using plenty of adhesive to pack glass out from the wall, when fitting.
- Please be sure that sockets are 20mm from the edge of the glass, or each other, unless they butt up to one another.
- We can cut an upside down “T” shape to avoid Joins.

Standard sizes for sockets

- Single socket 75mm x 75mm
- Double socket 135mm x 75mm
